

# User Manual for Compact Solar Power Bank

## Specifications

- Capacity: 10000mAh
- Battery type: Li-Ion
- USB input: 2A/5V (MicroUSB and USB-C)
- USB outputs: 2.1/5V (3 x USB-A)
- Dimensions: 80 x 80 x 28 mm
- Weight: 220g

1. Solar panel
2. Type-C/MicroUSB input port
3. Switch/Battery indicator
4. USB1 output
5. USB2 output
6. USB3 output
7. LED flashlight

## **Functions of the power bank**

To turn on the LED flashlight press the power switch twice quickly. To turn it off, double-press the power switch again.

There are two ways to charge the power bank: via cable and using the solar panel. To charge the power bank using the solar panel, put it in sunlight and the indicator light will power on. Solar energy charging is an emergency function in the field. The capacity of the solar panel is 200mA per hour, therefore it's more efficient to charge the power bank using a cable.
